

Forg3t Protocol Avalanche Grant Phase 2

Grant Manager Review Packet | Code-Side Evidence and Live Demo Access

Prepared: 2026-05-24 | Network: Avalanche C-Chain mainnet | Status: code-side review ready

Executive Summary

Forg3t Protocol now has a reviewable Phase 2 product implementation for black-box AI suppression/unlearning evidence workflows. The repository-controlled milestones have been implemented or strengthened across frontend, Supabase backend, database/RBAC, Avalanche anchoring, reports, pipelines, API integrations, tests, documentation, and dependency audit posture.

This packet intentionally does not claim enterprise pilot approval, customer attestation, real customer usage, founder sales material, or recorded demo completion. Those items require external human evidence and should be supplied separately.

Live Review Access

Production app	https://buildgames.forg3t.io
Reviewer email	grant-reviewer@forg3t.io
Reviewer password	Share separately via a secure channel; do not commit or embed.
Reviewer role	admin on the Phase 2 review project
Public verify route	https://buildgames.forg3t.io/verify/212a028eabcac5e2c3458cc9f219259d
Public API verify	https://xewxfsdrtgpthkpbhbpz.supabase.co/functions/v1/verify-evidence?token=212a028eabcac5e2c3458cc9f219259d
Snowtrace transaction	https://snowtrace.io/tx/0x7af8b0376079571f2a4ff46ff76e6cdfb27f710ea4b2434c41bdfd25a167e7be

Security note: this reviewer account is intended only for grant review. Rotate or delete it after the review window.

Primary Evidence Record

Job ID	9a2a77cf-4b09-4f59-be04-c18b08b137bd
Evidence ID	608a427f-25c1-4f43-b3e7-d9a86ff33801
Evidence hash	0x1c01887f16bc967d3e53042db25c8cfe2ad9611222a1b7a2f8326190061b4b0b
Job hash	0x9b7077f20c7a481b176684181bc7c28cab90a96d93ce73463dccfe12cce649e
Anchor status	confirmed
Network	mainnet
Chain ID	43114
Block number	86276105
Contract	0x20E772a60CEE7D8E6706E698B129FD917c3936bf
Transaction	0x7af8b0376079571f2a4ff46ff76e6cdfb27f710ea4b2434c41bdfd25a167e7be

Milestone Completion Matrix

Milestone	Status	Evidence
Evidence anchoring	Completed	Job to evidence hash to Avalanche mainnet anchor to verification result. Tx hash, network, block, contract, and Snowtrace link are visible.
Drag-and-drop verification	Completed	Dashboard verify flow supports JSON/PDF-style evidence checks and states: valid, mismatch, pending, confirmed, failed.
Job history and evidence UX	Completed	Job list/detail, evidence detail, public verify links, anchor visibility, and report access were strengthened for reviewer navigation.
Reporting exports and RBAC	Completed	JSON, CSV, and PDF exports are available from job/evidence records. RBAC behavior covers owner, admin, compliance, auditor, developer, viewer.
Repeatable pipelines	Completed	Pipeline runs can create multiple jobs and move them through evidence generation, optional anchoring, verification, and report export where configured.
API-based AI integrations	Completed	OpenAI-compatible and generic HTTP integration flows are documented with lifecycle examples from setup to job/evidence retrieval.
Documentation	Completed	README and Phase 2 readiness docs include commands, routes, expected outputs, and non-code exclusions.
Dependency audit	Completed	Frontend package and contracts package both return npm audit: 0 vulnerabilities.

Reviewer Walkthrough

- Open the production app and sign in with the reviewer account above.
- Go to Jobs and open the completed Phase 2 smoke job.
- Confirm evidence hash, job hash, anchor status, network, block number, transaction hash, and explorer link.
- Open the Evidence detail page and review manifest/report payload/export access.
- Open the public verify route and confirm Anchor Confirmed on mainnet.
- Open the Snowtrace transaction link and confirm the C-Chain transaction exists.
- Use Verify to test evidence JSON/PDF drag-and-drop verification states.
- Open Pipelines to inspect repeatable pipeline run support.

Commands and Verification Outputs

Command	Result
npm audit	0 vulnerabilities in project package
npm test	4 test files passed, 15 tests passed
npm run lint	Passed
npm run build	Passed with Vite 8 production build
cd contracts; npm audit	0 vulnerabilities in contracts package
cd contracts; npm run compile	Passed with Node 22.13+ / Node 24 runtime
contracts local deploy smoke	Passed on local Hardhat simulated network

Explicit Non-Code Exclusions

The following items are not claimed as completed in this repository packet because they require external proof or manual review artifacts:

- Enterprise pilot approval
- Customer attestation
- Real customer usage evidence
- Founder/sales material
- Recorded demo/video
- Optional Snowtrace contract source verification, if the reviewer requests it separately

Known Review Risks

- Black-box suppression verification is supported; internal model-weight deletion is not claimed unless an integration supplies verifiable internal evidence.

- Contracts now use Hardhat 3 to clear audit findings, which requires Node 22.13.0 or newer.
- Hardhat automatic Snowtrace source verification plugin was removed because it reintroduced audited legacy ethers dependencies; manual Snowtrace verification remains possible.
- The reviewer account is live and should be rotated after review.

Final Code-Side Readiness Statement

All repository-controlled Phase 2 product and code milestones are implemented or strengthened. Remaining items are external proof, human approval, demo capture, or optional manual contract-source verification.
